

Uploading content from Excell

Uploading content from Excel

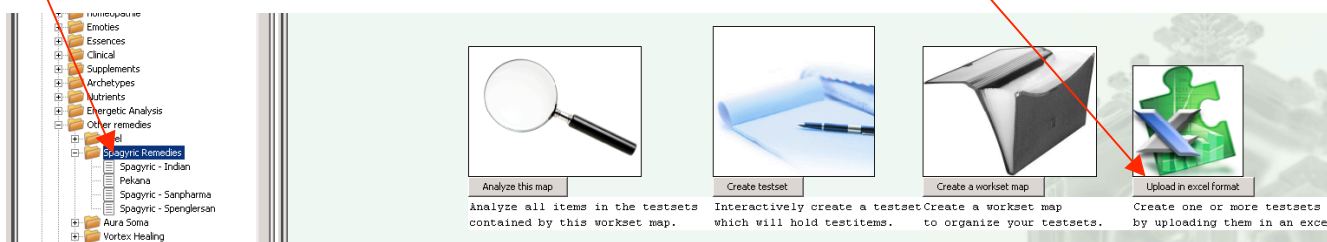

With Scaling it is very easy to upload content information for testsets.

For instance you have made a Spagyric testset content in an Excel format.

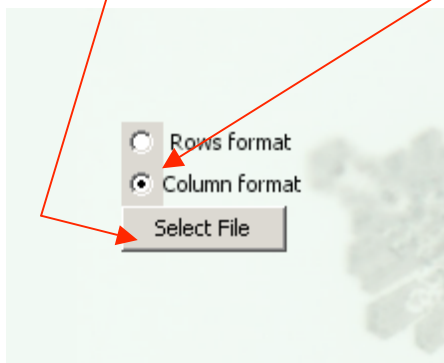

First choose the workset-map you want to add a testset into.

Left click on the worksetmap and click on 'upload in Excel format'

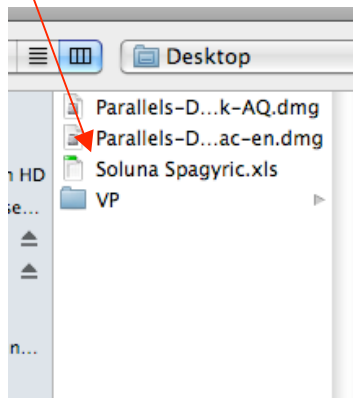

A new format appears, choose the format in which you have made the testset, by clicking on Rows Format or Column Format, then click 'Select File'

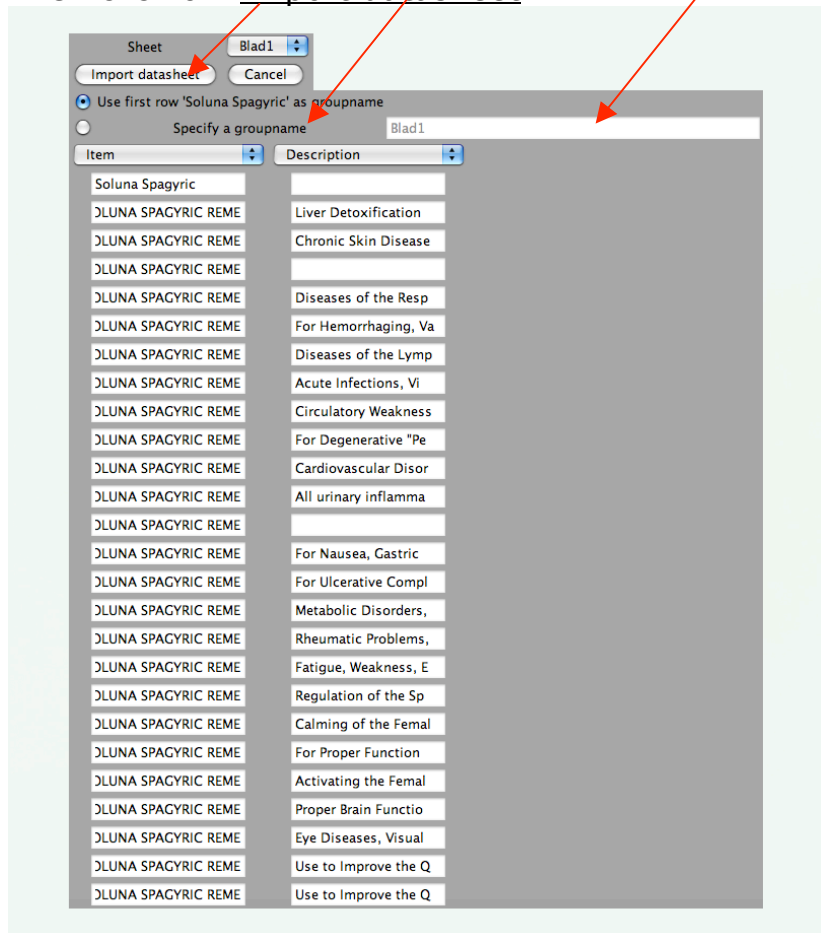

Uploading content from Excell

In a new format you can select the map where you saved the Excel file you want to use, here on the Desktop – select the file 'Soluna Spagyric.xls', by double clicking

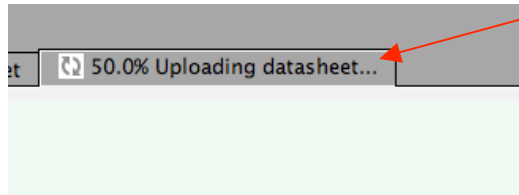

The content of the testset appear in a new format
The name of the testset is in the first line. You can change it by clicking on 'Specify a groupname' and enter the correct name.
In the scan the "Description" is only visible by moving the mouse to the item (a text block appears).
Then click on 'Import datasheet'

Uploading content from Excell

In the left upper center you see a little tab with the progress of the uploading datasheet, until...

...100%
